

# WILD FOR WET CAKE

Our wet distillers grains, or “wet cake”, is a great source of protein and energy - no different than dry distillers grains!

## BENEFITS:

### HIGHER PERFORMANCE

POET’s patented no bake process makes our wet cake 32% more digestible while providing a good source of protein and energy.

### NO WORRIES

POET ensures a consistent product and guaranteed supply - every time.

### IT’S EASY!

Buy direct with one call! You can pick up or we’ll deliver from the local POET Bioprocessing location in Laddonia, MO.

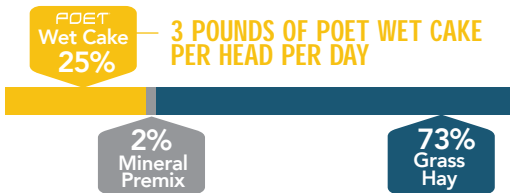

# WILD FOR WET CAKE

## RECOMMENDED DIETS

It is important for cows to have the appropriate diet for their stage of gestation. These recommended dietary guidelines are designed to help achieve optimal performance.

### EARLY GESTATION

This early gestation diet provides a dry matter mix of greater than 10% protein and greater than 52% total digestible nutrients (TDN).

### LATE GESTATION

This late gestation diet provides a dry matter mix with greater than 11.5% protein and greater than 55% TDN.

*The above dietary restrictions depend on goals for body condition, environmental condition, and current nutritional status. Grass hay would contain less than 8% protein and less than 50% TDN.*
